

... for new lines and upgrade for existing lines

#### Process:

- Light pre-entangling of carded webs with FLEISSNER AquaJet technology
- Chemical bonding with FLEISSNER foam padder
- Drying with FLEISSNER perforated drum technology

#### Applications:

- Hygiene
- Technical textiles
- Wipes
- Medical applications

#### Advantages:

- Increase of line speeds and throughput from today's 80 m/min to max. 200 m/min
- Higher tensile strength of the web
- Better distribution of the binder in the dewatered moist web
- Less binder pick-up necessary due to pre-entanglement of carded webs
